

*AMENDMENTS TO THE CLAIMS*

This listing of claims will replace all prior versions and listings of claims in the application:

*LISTING OF CLAIMS*

Claim 1 (Currently Amended): A ring-like article of manufacture capable of being worn as jewelry such as a ring on a finger or wrist of a human for adornment, having a circumferential axis; a triangular-shaped cross section at every cross-sectional location taken transverse to the circumferential axis; the cross section having three sides and three vertexes throughout the circumferential axis; the cross section ~~rotating~~ being a 120° rotation of the triangular shape about the circumferential axis, through a distance of one complete circumference of the ring;

wherein

a single continuous, endless surface forms all three sides of the triangular cross section, and a singular continuous, endless ridge forms each of the three vertexes where the sides of the triangular cross section meet and wherein the endless ridge is also on the interior surface of the ring and forms an interior internal thread capable of screwing or unscrewing the ring onto, or off of, the finger or wrist.

Claim 2 (Currently Amended): The ring-like article of manufacture of claim 1 wherein the ~~ring rotates~~ rotation of the cross sectional shape ~~rotational position~~ in one complete circumference about the circumferential axis is a multiple of 120° that is not 360° or a multiples of 360° or divisible integrally by 360°, ~~through a distance of one complete circumference of the ring.~~

Claim 3 (Canceled).

Claim 4 (Canceled).

Claim 5 (Currently Amended): The ring-like article of manufacture of claim 1 or claim 2, wherein the rotational position of the triangular cross section is uniform throughout the ~~travel about the circumference~~ circumferential axis of the ring.

Claim 6 (Canceled).

Claim 7 (New): The ring-like article of manufacture of claim 1 wherein the triangular-shaped cross section has sides of equal length.

Claim 8 (New): The ring-like article of manufacture of claim 1 wherein the triangular-shaped cross section has no more than two sides of equal length.

Claim 9 (New): The ring-like article of manufacture of claim 1 wherein the triangular-shaped cross section has sides of unequal length.

Claim 10 (New): The ring-like article of manufacture of claim 1 wherein the triangular-shaped cross section in one location transverse to the circumferential axis has sides of equal length, and at every other location transverse to the circumferential axis has sides of unequal length.

Claim 11 (New): The ring-like article of manufacture as claimed in claim 1 wherein the triangular-shaped cross section changes between more than one of equilateral, isosceles, obtuse and scalene triangles in the circumferential axis.
